

How well are you using **external data** to identify risk to your organization?

83% of cyber attacks have an external origin. When protecting against adversary groups, cybersecurity teams are at a disadvantage because of **ever-expanding** data sets, **noisy** data feeds, and an **accelerating time frame** between vulnerabilities, exploits, and leaks.

Use AI across Public Data to detect external threats with the necessary:

Speed

Real-time threat detection

Proactively manage risk by knowing in real-time and acting quickly.

Scope

Broad threat landscape coverage

Avoid missed threats with broad coverage of public data sources and formats.

Relevance

Actionable Alerts

Focus teams on prioritizing and managing risk, not searching for it.

Enhance cyber resilience with Dataminr Pulse for Cyber Risk, a real-time, external cyber event, risk, and threat detection solution that empowers your team to:

IDENTIFY DIGITAL RISK

Respond quickly to early warnings of threats to and exposures of your organization's digital assets.

EXPOSE THIRD-PARTY RISK

Mitigate risk to your organization with increased visibility into threats to your subsidiaries, vendors, and service providers.

RECEIVE VULNERABILITY INTELLIGENCE

Improve prioritization of patching with visibility into the full lifecycle of vulnerabilities.

RESPOND TO CYBER-PHYSICAL RISKS

Respond to real-time alerts on cyber threats affecting physical assets and physical threats affecting digital assets.

The speed at which ransomware gangs operate ensures the need for a timely response. Dataminr was able to spot one of our key suppliers being named as a victim of ransomware before any other source. This allowed us to put protections in place to reduce our potential exposure.

Cyber Threat Hunt Specialist, Multinational Financial Company

Many of the world's largest corporations rely on Dataminr.

CUSTOMERS INCLUDE

FORTUNE 50

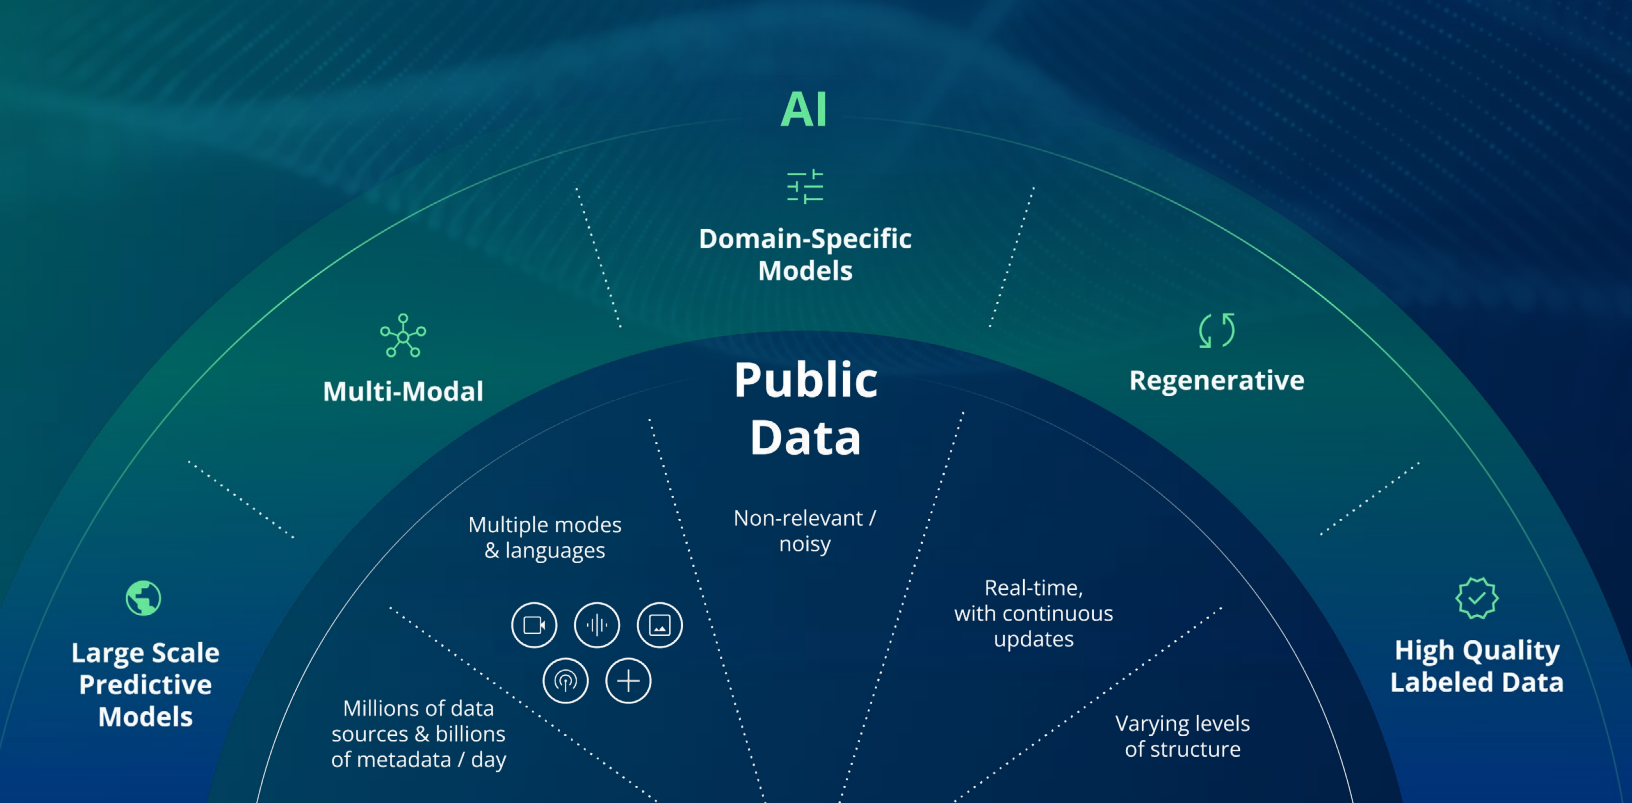

FORTUNE 100

Spot the earliest indicators of external threats and vulnerabilities

Dataminr's **Pioneering AI Platform** ingests information from over 1M+ publicly available data sources in 150+ languages in 220+ countries to detect **external cyber risks, events, and threats** in real-time. Leveraging 50 large language models (LLMs) and over 12 years of trusted historical data, the platform eliminates blind spots that create risk, while notifying you of the ones relevant to your organization.
