Dataminr + **Microsoft Teams**

Dataminr real-time alerting, collaboration, and response in Microsoft Teams

When facing risk, minutes or hours can be the difference between an effective response or significant damage to your business and employees.

Improve your incident response and management workflows seamlessly with Dataminr's real-time alerts integrated directly into Microsoft Teams. Accelerate your response to organization-impacting events, improve collaboration across departments and locations, and easily share configurable alerts with stakeholders outside the Dataminr platform or without access to security systems.

REAL-TIME ALERTS RELEVANT TO YOUR BUSINESS

Dataminr Pulse delivers high-quality alerts tailored to your business needs, accessible anywhere with Microsoft Teams integration and single sign-on (SSO) compatibility. Whether safeguarding employees and locations, ensuring traveler safety, or enabling collaboration across regional security teams, alerts are timely, relevant, and actionable.

TRACK, COMMUNICATE, AND COLLABORATE ON ALERTS

Keep employees in the tools they're already using. Security and adjacent teams such as operations, business continuity, and HR can be part of the alerting workflow via group chats, channels, or personal chat in Teams.

CREATE, MANAGE, AND RESPOND TO INCIDENTS

Streamline incident workflows by adding intelligent insights to Teams channels, including Dataminr alert metadata such as cyber alert context and physical asset distance.
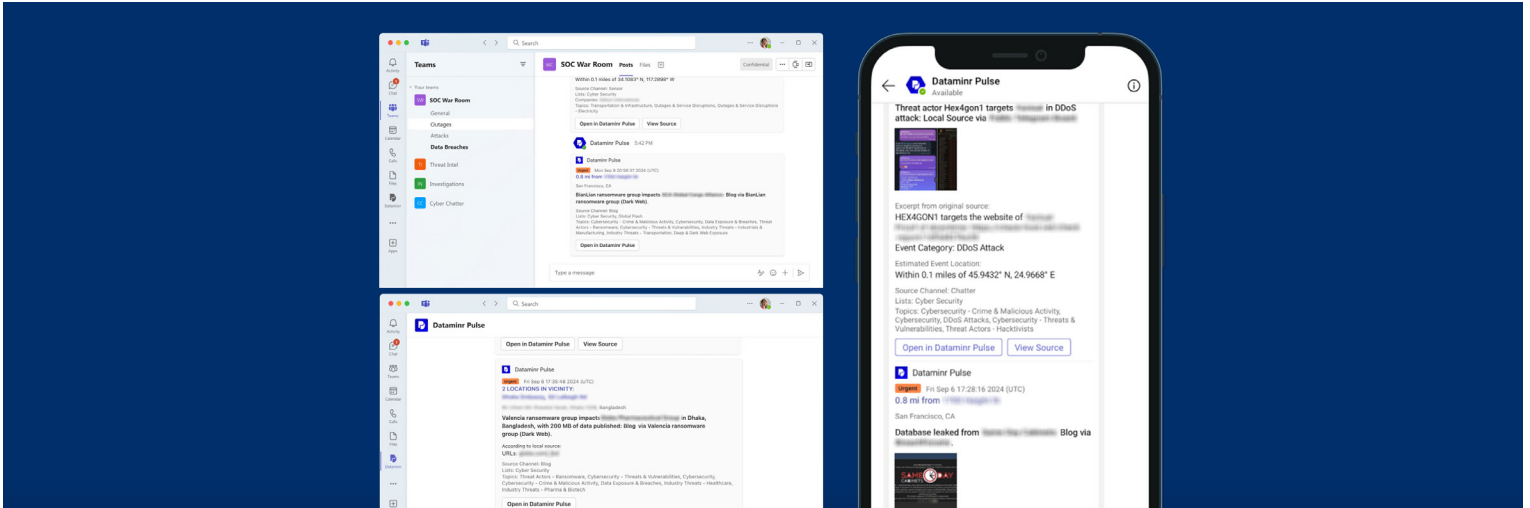

DISTRIBUTE ALERTS FOR RAPID AWARENESS

Configure Dataminr to send alerts to Teams channels based on region, role, or content to inform employees of relevant information, such as an event in close proximity to an office or travel destination.

Dataminr Pulse integrated with Microsoft Teams streamlines communication and operationalizes AI alerting across departments, including corporate security, operations, supply chain, and HR.
